

Supplementary Figure 1: Key prognostic genes identified for OS prediction. Cox and meta-analyses across eight cohorts identified 689 survival-associated gastric cancer genes ($p < 0.05$). LASSO regression refined these to 16 OS-linked genes.

Supplementary Figure 2: Correlation analysis between immunogen-related markers and IRGS score. Immunogen-related markers included a) TMB, b) tumor purity, c) PDCD1, d) LAG3, e) CTLA4, f) TIGIT, g) CD274, and h) HAVCE2.

Supplementary Figure 3: Analysis of IRGS scores in different subgroups. a) the comparison of IRGS levels with different clinical stages, and b) the comparison of IRGS levels with common markers of gastric cancer.
