## Supplementary Figures

**Supplementary Figure 1.** (a) XRD patterns of HEA-1 to HEA-8 collected at a scan rate of 5°/min; (b) corresponding lattice parameters obtained by GSAS-II refinement.

**Supplementary Figure 2.** Comparison of XRD patterns of HEA-1 to HEA-8 collected at scan rates of 5°/min and 2°/min: (a) HEA-1, (b) HEA-2, (c) HEA-3, (d) HEA-4, (e) HEA-5, (f) HEA-6, (g) HEA-7, and (h) HEA-8.

**Supplementary Figure 3.** The higher-magnification BSE images (a-h) and the corresponding EDS maps (a'-h') of HEA-1 to HEA-8 alloys.

**Supplementary Figure 4.** EDS line-scan results of the HEA-8 alloy: (a) grain boundary region and (b) grain interior region.

**Supplementary Figure 5.** Repeated initial hydrogen absorption kinetics curves of activated HEA-1 to HEA-8 measured at 303 K and 5 MPa hydrogen pressure: (a) HEA-1, (b) HEA-2, (c) HEA-3, (d) HEA-4, (e) HEA-5, (f) HEA-6, (g) HEA-7, and (h) HEA-8. These repeated measurements were used to calculate the standard deviations of the H/M values, which are shown as error bars in Figure 5b.

**Supplementary Figure 6.** TDS hydrogen desorption curves and corresponding integration results of the HEA-8 alloy with different hydrogen contents: (a) 2.83 wt.%, (b) 1.88 wt.%, (c) 1.32 wt.%, and (d) 1.18 wt.%.

**Supplementary Figure 7.** XRD pattern of the HEA-8 alloy after dynamic vacuum dehydrogenation at 773 K for 1 h.

**Supplementary Figure 8.** TDS hydrogen desorption curves and corresponding

Gaussian peak deconvolution results of the HEA-1 alloy at different heating rates: (a) 10 K/min, (b) 15 K/min, and (c) 20 K/min.

**Supplementary Figure 9.** TDS hydrogen desorption curves and corresponding Gaussian peak deconvolution results of the HEA-2 alloy at different heating rates: (a) 10 K/min, (b) 15 K/min, and (c) 20 K/min.

**Supplementary Figure 10.** TDS hydrogen desorption curves and corresponding Gaussian peak deconvolution results of the HEA-3 alloy at different heating rates: (a) 10 K/min, (b) 15 K/min, and (c) 20 K/min.

**Supplementary Figure 11.** TDS hydrogen desorption curves and corresponding Gaussian peak deconvolution results of the HEA-4 alloy at different heating rates: (a) 10 K/min, (b) 15 K/min, and (c) 20 K/min.

**Supplementary Figure 12.** TDS hydrogen desorption curves and corresponding Gaussian peak deconvolution results of the HEA-5 alloy at different heating rates: (a) 10 K/min, (b) 15 K/min, and (c) 20 K/min.

**Supplementary Figure 13.** TDS hydrogen desorption curves and corresponding Gaussian peak deconvolution results of the HEA-6 alloy at different heating rates: (a) 10 K/min, (b) 15 K/min, and (c) 20 K/min.

**Supplementary Figure 14.** TDS hydrogen desorption curves and corresponding Gaussian peak deconvolution results of the HEA-7 alloy at different heating rates: (a) 10 K/min, (b) 15 K/min, and (c) 20 K/min.

**Supplementary Figure 15.** TDS hydrogen desorption curves and corresponding Gaussian peak deconvolution results of the HEA-8 alloy at different heating rates: (a) 10 K/min, (b) 15 K/min, and (c) 20 K/min.

### Supplementary Tables

**Supplementary Table 1.** The atomic radius ( $r$ ),  $VEC$ , and Pauling electronegativity ( $\chi^P$ ) of the elements are involved

| Element | $r$ [Å] | VEC | $\chi^P$ |
|---------|---------|-----|----------|
| H       | -       | -   | 2.20     |
| Ti      | 1.462   | 4   | 1.54     |
| V       | 1.316   | 5   | 1.63     |
| Zr      | 1.603   | 4   | 1.33     |
| Nb      | 1.429   | 5   | 1.60     |
| Mo      | 1.363   | 6   | 2.16     |
| Cr      | 1.249   | 6   | 1.66     |
| Fe      | 1.241   | 8   | 1.83     |
| Mn      | 1.350   | 7   | 1.55     |

**Supplementary Table 2.** Atomic ratios and lattice constants for alloys HEA-1 to HEA-8

| Alloy | Composition                                                           | $a$ (Å)   |           |
|-------|-----------------------------------------------------------------------|-----------|-----------|
|       |                                                                       | 5 °/min   | 2 °/min   |
| HEA-1 | Ti <sub>40</sub> V <sub>30</sub> Zr <sub>10</sub> Nb <sub>20</sub>    | 3.2592(5) | 3.2594(5) |
| HEA-2 | Ti <sub>35</sub> V <sub>30</sub> Zr <sub>10</sub> Nb <sub>25</sub>    | 3.2568(4) | 3.2568(4) |
| HEA-3 | Ti <sub>30</sub> V <sub>30</sub> Zr <sub>10</sub> Nb <sub>30</sub>    | 3.2543(4) | 3.2543(4) |
| HEA-4 | Ti <sub>25</sub> V <sub>30</sub> Zr <sub>10</sub> Nb <sub>35</sub>    | 3.2523(5) | 3.2521(5) |
| HEA-5 | Ti <sub>27.5</sub> V <sub>30</sub> Zr <sub>7.5</sub> Nb <sub>35</sub> | 3.2499(4) | 3.2499(4) |

|       |                                                                       |           |           |
|-------|-----------------------------------------------------------------------|-----------|-----------|
| HEA-6 | Ti <sub>30</sub> V <sub>30</sub> Zr <sub>5</sub> Nb <sub>35</sub>     | 3.2480(4) | 3.2480(4) |
| HEA-7 | Ti <sub>27.5</sub> V <sub>30</sub> Zr <sub>5</sub> Nb <sub>37.5</sub> | 3.2471(4) | 3.2470(4) |
| HEA-8 | Ti <sub>25</sub> V <sub>30</sub> Zr <sub>5</sub> Nb <sub>40</sub>     | 3.2458(4) | 3.2458(4) |

Note: The values in parentheses represent the standard uncertainties in the last digit obtained from GSAS-II refinement.

**Supplementary Table 3. Actual PCT test temperatures used for Van't Hoff analysis, hydrogen absorption/desorption plateau pressures, and enthalpy changes of HEA-1 to HEA-8 alloys**

| Sample | Temp.[K] | Pressure |       | $\Delta H$ [kJ/mol H <sub>2</sub> ] |            | Van't Hoff fitting parameters- <i>p value</i> |        |

| HEA-8 | 438 | 0.194 | 0.011 | -93.9±5.15 | 97.3±1.99 | 0.0353 | 0.0130 |
|       | 453 | 0.417 | 0.027 |            |           |        |        |

**Notes:** The temperatures listed in this table are the actual PCT test temperatures used for the Van't Hoff fitting. The first extremely low-pressure plateau associated with the highly stable  $\beta$ -hydride phase was not included in the Van't Hoff fitting. The listed plateau pressures correspond to the main measurable absorption/desorption plateau related to the practical reversible hydrogen storage capacity. The plateau pressures were obtained from the middle region of the measurable main absorption/desorption plateau. The 303 K PCT curves shown in Figure 6 were used only to illustrate the initial hydrogen absorption behavior and capacity characteristics and were not included in the Van't Hoff analysis. The uncertainties of  $\Delta H_{abs}$  and  $\Delta H_{des}$  were calculated from the standard errors of the slopes in the Van't Hoff linear fittings performed using Origin.

**Supplementary Table 4. Peak temperatures obtained from Gaussian deconvolution of TDS curves at different heating rates and apparent activation energies of Peak1 for HEA-1 to HEA-8 alloys**

| Sample | Peak | Peak temperature (K) |       |       |       | $E_a$ (kJ/mol) |
|--------|------|----------------------|-------|-------|-------|----------------|
|        |      | 5                    | 10    | 15    | 20    |                |
|        |      | K/min                | K/min | K/min | K/min |                |
| HEA-1  | 1    | 632                  | 641   | 648   | 651   | 232.21±4.39    |
|        | 2    | 681                  | 690   | 700   | 711   |                |
|        | 3    | 810                  | 822   | 826   | 830   |                |
